

MATHEMATICS

We went through the proposed syllabus of M.A/M.Sc programme in Mathematics, based on CBCS scheme to be effective from 2018-2019, placed before us. On the pages of scheme of examination typographical error were found and corrected accordingly. In Paper I (MAT CC-01), Unit 2 has been added and the corresponding syllabus is attached at the proper place. In Paper II (MAT CC-02) typographical error ^{has been} ~~is~~ detected and corrected accordingly. In Paper IX (MAT-CC-09), the syllabus is found to be very lengthy and accordingly some portions have been underlined which are to be deleted. These deleted portions have been collected and added to the list of electives under the head Advanced Topology, Banach Algebras, Commutative Algebra and Programming in C have been added to the list of electives alongwith their corresponding syllabus.

SCHEME OF EXAMINATION

Passing of Examination and Promotion Rule

The Post Graduate Course in Mathematics shall be of two academic sessions comprising of FOUR SEMESTERS. Each academic session shall consist of two Semesters – I & III from July to December and Semester - II & IV from January to June.

Each theory paper irrespective of their nature and credits shall be of 100 marks out of which the performance of a student in each paper will be assessed on the basis of Continuous Internal Assessment (CIA) of 30 marks and the End Semester Examination (ESE) consisting of 70 marks.

The components of CIA shall be

| | |
|--|----------|
| (a) Two Mid Semester Written Tests of one hour duration each | 15 Marks |
| (b) Seminar/quiz | 5 Marks |
| (c) Assignment | 5 Marks |
| (d) Punctuality & Conduct | 5 Marks |

| | |
|-------|----------|
| Total | 30 Marks |
|-------|----------|

1. There shall be no supplementary examination in any of the Semester Course (I, II, III & IV).
2. A student who has appeared at the CIA and attended the required minimum percentage (75%) of the attendance in theory shall be permitted to appear in the End Semester Examination (ESE).
3. To be declared passed in ESE in any subject, a students must secure at least 45% marks in each paper separately.

A student has to secure minimum 45% marks in CIA of any paper. In case, a student fails to secure minimum 50% marks in CIA of any paper, he/she will be declared fail in that paper. Students shall have to reappear in that paper and in CIA examination also in the same semester of next academic session.

If students fail to secure minimum 50% marks in CIA of any paper his result will be declared as fail in that paper. Students shall have to reappear in that paper in the same semester of next academic session.

A promoted candidate, if he has passed in CIA but fails in theory paper/papers, he/she shall retain his/her CIA award and will reappear in the theory paper only of the semester whenever available. However, if a candidate is declared fail in any End Semester Examination, shall retain nothing and will have to redo the course work of failed semester again and he has to appear again in CIA as-well-as in theory paper.

4. If a candidate passes in at least two paper in his/her First, Second and third End Semester Examination, he/she shall be promoted to next higher semester. But he/she will have to clear their backlog papers in the next end semester examination of that semester whenever it is

Prasad 12/6/18 *Pr Singh* 12.6.18 *Singh* 12.6.18

available. Even if a student is promoted to fourth semester his final result will only be declared when he/she has cleared all their backlog papers.

5. Final result of M.Sc. will be published only after he/she has cleared all the 16 paper securing minimum qualifying marks.
6. Student shall be awarded Grade Point (GP) at the end of each semester examination and Cumulative Grade Point (CGP) at the end of final End Semester Examination in 10 point scoring system.

Declaration of Result

The following grading system shall be used by teacher/ Examination department

| Letter Grade | Percentage Range | Number of Letter Grade | Description of Grade |
|--------------|------------------|------------------------|----------------------|
| O | 90-100 | 10 | Outstanding |
| A++ | 80-89 | 9 | Excellent |
| A+ | 70-79 | 8 | Very Good |
| A | 60-69 | 7 | Good |
| B+ | 50-59 | 6 | Average |
| B | 45-49 | 5 | Pass |
| F | Less than 45 | Less than 5 | Fail |

A student shall be declared to have passed and promoted to the next semester when he/she earns B or above grade in the semester examination covering continuous evaluation, mid term and end term examination.

Syllabus of M.A/M.Sc. (Mathematics) Semester I

PAPER I (MAT CC 01)

Abstract Algebra

Abstract Algebra

Prerequisites: Introduction to Group, Elementary Properties of Group, Finite Group,

and subgroup, Cyclic Group, Permutation Group, Properties of Permutations, rings, integral Domains, Characteristic of rings.

Unit 1: Homomorphism; Group actions, Sylow theorems, Normal and subnormal series composition series of a group, Jordan- Holder Theorem, Solvable groups, commutator subgroup of a group, Nilpotent groups

Unit 2: Ring homomorphism, isomorphism, quotient rings, ideals, Kernel of ring homomorphism, principal ideal ring and domain, prime and maximal ideal, Euclidean domain.

Unit 3 : Extension fields , algebraic and transcendental extension, splitting field of Polynomial, separable and inseparable extension, normal extension, constructible real numbers.

Unit 4 : Cyclic Modules, simple Modules, semi-simple Modules, Schur's Lemma, Free Modules.

Unit 5: Solution of equations by radicals, insolvability of equations of degree 5 by radicals.

PAPER II (MAT CC- 02)

Real Analysis

Real Analysis

Unit 1: Sequences and series of functions, pointwise and uniform convergence, Cauchy criterion for uniform convergence, Weierstrass-M test, Abel's and Dirichlet's test for uniform convergence.

Unit 2: Uniform convergence and differentiation, Weierstrass approximation theorem
Power series, Uniqueness theorem for power series, Abel's and Tauber's theorem.

Unit 3 : Definition and examples of Riemann-Stieltje's integral Property of integral,
Integration and differentiation, the fundamental theorem of Calculus, Integration
Of vector valued function, rectifiable curves.

Unit 4 : Functions of several variables, linear transformation, Derivatives in an open subset
of R^n , chain rule, partial derivatives, interchange of order of differentiation,
derivative. of higher orders, Taylor's theorem.

Unit 5 : Inverse function theorem, Implicit function theorem, Jacobians, Extremum
Problems with constraints, Lagrange's multiplier methods, differentiation of
Integrals, partition of unity, Differential forms, Stoke's theorem.

PAPER III (MAT CC-03)

Linear Algebra

Linear Algebra

Unit 1: Finite dimensional vector spaces; Linear transformations and their matrix representations, rank; systems of linear equations, eigenvalues and eigenvectors, minimal polynomial, Cayley-Hamilton Theorem, diagonalization ..

Unit 2: Hermitian, SkewHermitian and unitary matrices; Finite dimensional inner product spaces, Gram-Schmidt orthonormalization process, self-adjoint operators.

Unit 3 : Similarity of linear transformations, Invariant subspaces, reduction to triangular forms, Nilpotent transformations, Index of Nilpotency, invariants of a Nilpotent transformations, primary decomposition theorem, Joardan blocks and Jordan forms rational canonical form

Unit 4 : Bilinear form, algebra of bilinear form Matrix of bilinear forms, degenerate and Non-degenerate bilinear forms, Alternating bilinear forms

Unit 5: Symmetric and Skew-symmetric bilinear forms, Quadratic form, law of Inertia, Sylvester's theorem, Hermitian forms definite forms.

PAPER IV (MAT CC-04)

Discrete Mathematics

Discrete Mathematics:

Graph Theory

Unit 1 : Definition of graphs , paths, circuits and subgraphs, induced subgraphs, degree of a vertex, connectivity, planar graphs and their properties, Trees and simple applications of graphs.

Lattice Theory

Unit 2 : Lattices as partially ordered sets and their properties, lattices as algebraic system, Sub lattices, direct products and Homomorphisms of Lattices some special lattices eg Complete lattices, complemented lattices and distributive lattices.

Boolean Algebra

Unit 3 : Boolean algebra as a complemented distributive lattice, Boolean rings, identification of Boolean algebra and Boolean rings, sub-algebra and generators.

Unit 4 : Boolean homomorphism and ring homomorphism ideals in a Boolean algebra and Dual ideals, Fundamental theorem of homomorphism and Stone's representation theorem for Boolean algebras and Boolean rings, simple application to electrical network, solvability of Boolean equations and logical puzzles.

Combinatorics

Unit 5 : Permutation and combinations, partitions, pigeonhole principle, inclusion-exclusion principle, generating functions, recurrence relations.

PAPER V (MAT CC-05)

General Advanced Mathematics

Set Theory:

Unit I: Elementary set theory, finite, countable and uncountable sets, Real number system as a complete ordered field, Archimedean property, supremum, infimum.

Fuzzy Set Theory:

Unit II : Fuzzy Sets Versus Crisp sets, Basic definitions, types, properties and representations of Fuzzy sets, Convex Fuzzy sets, Basics operation on Fuzzy set, α - Cuts, Decompositions theorem, Complements, t- norm and t-conorms, Extension principles and Simple applications of Fuzzy sets.

Graph Theory:

Unit III : Definition of graphs , paths, circuits and subgraphs, induced subgraphs, degree of a vertex, connectivity, planar graphs and their properties, Trees and simple applications of graphs.

Number Theory:

Unit IV : Divisibility Theory In the Integers: Division Algorithm, the Greatest Common Divisor. The Euclidean Algorithm, The Diophantine Equations $ax+by = c$, Fundamental Theorem of Arithmetic.

PAPER VI (MAT CC-06)

Complex Analysis

Complex Analysis:

Unit 1 : Algebra of complex numbers, the complex plane, polynomials, power series, transcendental functions such as exponential, trigonometric and hyperbolic functions. Analytic functions, Cauchy-Riemann equations.

Unit 2 : Contour integral, Cauchy's theorem, Cauchy's integral formula, Liouville's theorem.

Unit 3 : Taylor's theorem, Maximum modulus Principle, Schwarz's Lemma, Laurent Series, Isolated singularities, Meromorphic function, Mittag-Leffler's theorem The argument principle, Rouché's theorem, fundamental theorem of algebra, Power series.

Unit 4 : Residues, Cauchy's residue theorem, Evaluation of integral, Branches of any valued functions with special reference to $\arg z$, $\log z$ and Bilinear transformations, their properties and classifications, definition and examples of conformal mappings. Mobius Transformations.

PAPER VII (MAT CC-07)

Differential and Integral Equation

Differential and Integral Equations

Unit 1: Initial Value problem and the equivalent integral equation, n order equation in d dimension as a first order system. Concepts of local existence, existence and uniqueness of solution with examples.

Unit 2: Integral Equations and their classifications. Eigen values and eigen functions. Fredholm Integral equations of Second Kind, Iterative Scheme and method of successive approximations.

Unit 3 : Ascoli- Arzela theorem, a theorem on convergence of solutions of a family of Initial value problems. Picard- Lindelof theorem, Peano's existence theorem Corollaries, Kamke's convergence theorem.

Unit 4 : Gronwall's inequality, maximal and minimal solution, Differential inequalities, Uniqueness theorem, Nagumo's and Osgood's criteria, successive approximations.

PAPER VIII (MAT CC-08)

Measure Theory

Measure theory:

Unit 1: Lebesgue outer measure, Measurable sets Measurability, Measurable functions, Borel and Lebesgue measurability, non- measurable sets.

Unit 2 : Integration of non-negative functions, the general integral, Integration of series, Riemann and Lebesgue integrals.

Unit 3 : The Four Derivatives, function of bounded variation, Lebesgue differentiation Theorems, Differentiation and Integration.

Unit 4 : Measure and outer measure, extension of measures, uniqueness of extension, Completion of a measure, measurable spaces, Integration with respect to a measure.

Unit 5 : The L^p -spaces, convex functions, Jensen inequality Holder's and Minkowski's Inequalities, completeness of L^p -spaces, convergence in measure, Almost uniform Convergence.

PAPER IX (MAT CC-09)

Topology

Unit 1 : Definition and examples of topological spaces, closed sets, dense subsets, Neighbourhood, interior, exterior, boundary and accumulation points. Derived Sets, Bases and subbases. Subspaces and Relative topology.

Unit 2 : Continuous functions and homeomorphism, characterisation of continuity in Terms of open sets, closed sets and closure. First and second countable topological spaces Lindelof's theorem, separable Spaces, second countability and separability.

Unit 3 : Separation axioms T_0 , T_1 and T_2 spaces and their basic properties, compactness, Continuous function and compact sets, basic properties of compactness and Finite intersection property.

Unit 4: Connectedness, continuous function and connected sets characterization of Connectedness in terms of a discrete two point space, connectedness on real line.

Unit 5 : Regular and Normal spaces T_3 and T_4 spaces, characterisations and basic properties, Urysohn's lemma and Tietze extension Theorems.

PAPER X (MAT CC-10)

Number Theory

Number Theory:

Unit-1

Divisibility, G.C.D and L.C.M., Primes, Fermat numbers, congruences and residues, theorems of Euler, Fermat and Wilson, solutions of congruences, linear congruences, Chinese remainder theorem.

Unit-2

Arithmetical functions $\varphi(n)$, $\mu(n)$ and $d(n)$ and $\sigma(n)$, Moebius inversion formula, congruences of higher degree, congruences of prime power modulli and prime modulus, power residue.

Unit-3

Quadratic residue, Legendre symbols, lemma of Gauss and reciprocity law. Jacobi symbols, Farey series, rational approximation, Hurwitz theorem, irrational numbers, irrationality of e and π , Representation of the real numbers by decimals.

Unit-4

Finite continued fractions, simple continued fractions, infinite simple continued fractions, periodic continued fractions, approximation by convergence, best possible approximation, Pell's equations, Lagrange four sphere theorem.

Functional Analysis

Functional Analysis

Unit 1 : Normed linear spaces, Banach spaces and examples, Quotient space of normed linear spaces and its completeness, equivalent norms, Riesz Lemma, Basic properties of finite dimensional normed linear spaces and compactness.

Unit 2 : Weak convergence and bounded linear transformation, normed linear spaces of bounded linear transformations, dual spaces with examples, uniform boundness theorem and some of its consequences.

Unit 3 : Open mapping theorem and closed graph theorem, Hahn- Banach Theorem on real linear spaces, complex linear spaces and normed linear spaces, Reflexive spaces.

Unit 4: Inner product spaces, Riesz lemma on Hilbert space, orthonormal sets and Parseval's identity, structure of Hilbert spaces, Projection theorem Riesz Representation Theorem.

Unit 5 : Adjoint of an operator on a Hilbert space, Reflexivity of Hilbert spaces, Self-adjoint Operators, positive operator, Projection, Normal and unitary operators.

Fluid Dynamics

Fluid Mechanics :

Unit 1 : Lagrangian and Eulerian methods, Equation of Continuity, Boundary Surfaces, Stream lines, Path lines and Streak lines, velocity potential, irrotational and rotational motions, vortex lines.

Unit 2 : Lagrange's and Euler's equations of motion, Bernoulli's theorem, equation of motion by flux method, equation referred to moving axis, impulsive actions.

Unit 3: Irrotational Motion in two dimension, stream function, complex velocity potential, sources, sinks, doublets and their images, conformal mapping, Milne-Thompson circle theorem.

Unit 4 : Two dimensional irrotational motion produced by motion of a circular, coaxial and elliptic cylinders in an infinite mass of liquid, kinetic energy of a liquid, Theorem of Blasius, motion of a sphere through a liquid at rest at infinity, liquid streaming past a fixed sphere, Equation of motion of a sphere, Stoke's stream function

Unit 5 : Vortex motion and its elementary properties, Kelvin's proof of permanence, Motion due to circular and rectilinear vortices.

PAPER XIII (MAT CC-13)

Classical Mechanics (Rigid Dynamics)

Unit 1 : Generalised Co-ordinates, Holonomic and Non Holonomic systems, Lagrange's equations of motion, energy equations for conservative fields.

Unit 2 : Hamilton's canonical equations, Routh's equations, Hamilton's Principle, Principle of Least Action.

Unit 3 : Small Oscillations, normal Co-ordinates, normal mode of vibration.

Unit 4 : Contact transformations, Lagrange brackets and Poisson brackets, the most general infinitesimal contact transformation, Hamilton- Jacobi equation.

Unit 5 : Motivating problem of Calculus of variation, Euler- Lagrange equation shortest distance, minimum surfaces of revolution, Brachistochrone problem.

Optimization Techniques

Linear Programming

Unit 1 : Simplex method for unrestricted variable, Two phase method, Dual simplex method, Parametric Linear programming, Upper Bound technique, Interior point algorithm, Linear Goal programming.

Unit 2 : Integer programming, Branch and bound technique, Gomory's algorithm.

Non- Linear programming :

Unit 3 : One and multi-variable unconstrained optimization, Kuhn- Tucker condition for constrained optimization, Wolfe's and Beale's methods.

Unit 4 : Game theory, Two person- Zero sum games with mixed strategies, Graphical solution by expressing as a linear programming problem.

Unit 5 : Inventory theory, Different costs of inventory model, Deterministic Economic lot size model, EOQ with uniform demand and several productions of unequal length / production runs of equal length EOQ models- Shortages not allowed, shortages allowed.

6. Advanced Topology

Unit 1: Countably compact spaces, sequentially compact spaces, totally bounded metric spaces

Unit 2: Lebesgue's covering lemma, spaces of continuous functions, Arzela-Ascoli Theorem, Weierstrass's approximation theorem.

Unit 3 : Stone Weierstrass's theorem, metrizable spaces and metrization theorems, uniform spaces, topology of uniform spaces.

Unit 4 : Uniform continuity, uniform metrizable topological spaces, metrizable uniform spaces.

Unit 5: Some properties of completely regular spaces, the Stone-Chech compactification.

7. Banach Algebras

Unit 1: Elementary properties and Examples of Banach Algebras, Ideal quotients, the spectrum of an element, dependence of spectrum on algebra, Abelian Banach Algebras.

Unit 2: Elementary properties of C^* -Algebras and examples, Abelian Algebras and functional calculus, positive elements.

Unit 3 : Ideals and quotients, representations of C^* -Algebras and the Gelfand-Naimark construction.

Unit 4 : Spectral measures and representations of Abelian C^* -Algebras, Special theorem.

Unit 5: Topologies on $B(H)$, the double commutant theorem and Abelian Von – Neumann Algebras.

8. Commutative Algebra

Unit 1: Ring and ring homomorphisms, ideals, quotient rings, Zero divisors, Nilpotent elements units, prime ideals and maximal ideals, Nil Radical and Jacobson Radical, Operations on ideals, extension and contraction.

Unit 2: Modules and module homomorphisms, sub-modules, quotient modules, Operations on sub-modules, Direct sum and products, Finitely generated modules, exact sequences.

Unit 3: Tensor product of modules, restriction and extension of scalars, exactness properties of tensor product, Algebras, Tensor product of algebras.

Unit 4: Local properties, extended and contracted ideals in ring of fractions, primary decompositions, integral dependence, the going-up theorem, integrally closed integral domains, the going-down theorem, chain conditions.

Unit 5: Primary decompositions in Noetherian ring, Artin rings, discrete valuation rings, Dedekind domains, Fractional ideals.
